

1. Recommendation Logic

Objective

The objective is to maximize reuse of candidates already present within the TalentXO ecosystem before recruiters source externally. Recommended candidates should be:

- Relevant to the job requirements
- Supported by strong profile evidence
- Likely to engage with recruiters
- Likely to convert into successful applications

Signal	Description	Weight
Structured Match	Skills, Experience, Location, Industry	50%
Semantic Match	Projects, Responsibilities, Domain Similarity	20%
Confidence Score	Strength of supporting evidence	15%
Engagement Score	Response rate, attendance, application completion	15%

Final Ranking

Final Score =
Match Score
+ Confidence Score
+ Engagement Score

Explainability

Requirement	Status	Evidence
SQL	✓	Skills + Experience
Dashboarding	✓	Project
Leadership	✗	Missing

2. AI-Native Recruiter Workflow

Stage	AI Capability	Recruiter Value
JD Intake	Extract skills, experience, responsibilities	Faster setup
Candidate Discovery	Structured + Semantic Search	Better recommendations
Match Details	Evidence retrieval & gap detection	Trust & transparency
Qualification	AI-generated screening questions	Faster evaluation
Assessment	Analyze candidate responses	Better decision-making
Dynamic Re-Ranking	Update scores based on responses	More accurate ranking
Submission	Auto-generate candidate summary	One-click submission
Feedback	Store hiring outcomes	Continuous improvement

Workflow

3. Candidate Reutilization Flywheel

Recruiter Memory

Store:

- Questions Asked
- Candidate Responses
- Recruiter Notes
- Previous Status

Workflow Tracking

Recommended

→ Contacted
→ Responded
→ Screening
→ Interview
→ Offered
→ Hired

Feedback Loop

Outcome	Usage
Rejected	Improve ranking
Interviewed	Measure quality
Offered	Measure conversion
Hired	Train future recommendations

This creates a reusable talent memory layer where previously screened candidates can be surfaced for future opportunities with existing context, reducing sourcing effort and improving recruiter productivity.

Why This Approach

- Maximizes utilization of TalentXO's existing candidate database
- Combines structured and semantic matching for better recommendations
- Provides transparent and explainable rankings
- Reduces recruiter effort through AI-assisted qualification
- Enables dynamic re-ranking based on new information
- Creates a reusable candidate knowledge base for future hiring needs
- Accelerates candidate submission through workflow automation
